

Evaluating the accuracy of classification in the model

Hello. I am currently working on my Master's thesis on an automatic segmentation of body parts in the dragonfly images.

I have trained a machine learning model (AI model) on annotated images of dragonflies. The objective is to have the model able to identify the parts of the dragonfly and extract the colors from each part. The parts that I want to recognise are

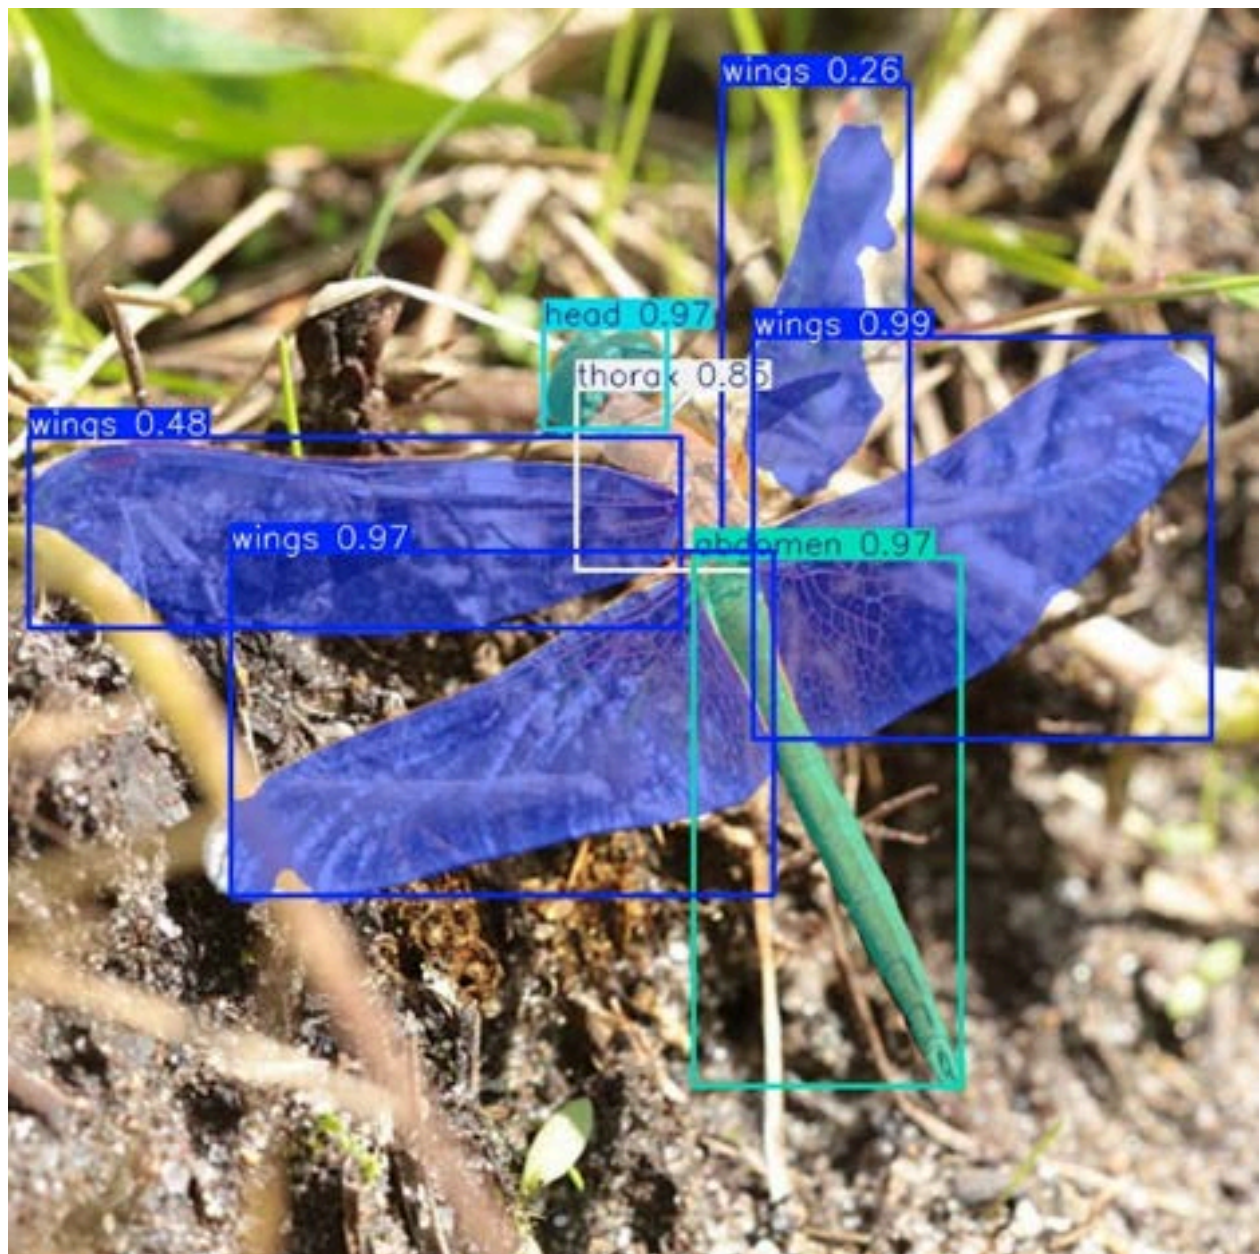

- Head
- Thorax
- Abdomen
- Wings

The quiz contains around 100 images of dragonflies with the predicted identification provided by the AI model of the parts, and overlaid with the mask and label. Please indicate if you agree with the classification from the model.

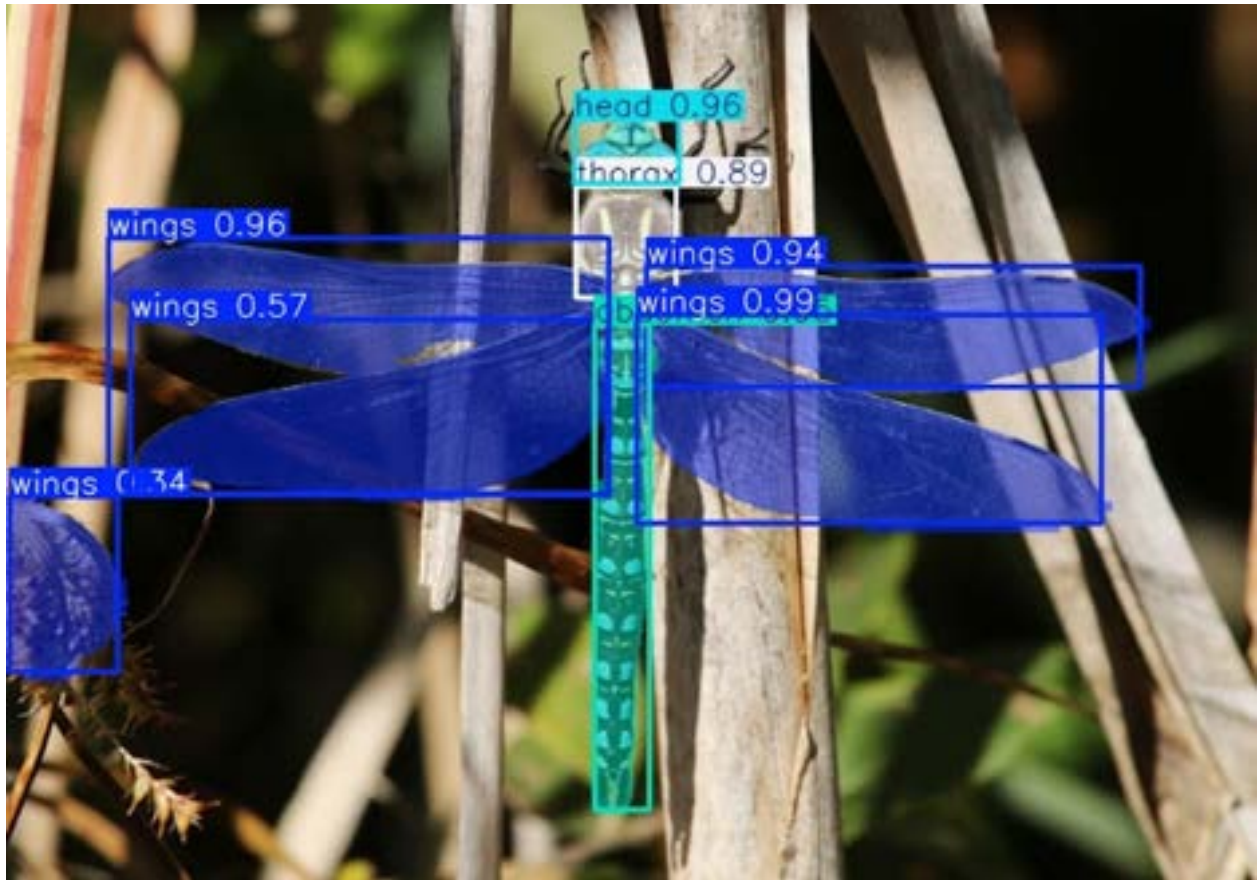

The response is divided into five categories. I have provided examples of the response for each category below.

If you have any questions or feedback, feel free to reach out to megan.rajaraman@naturalis.nl

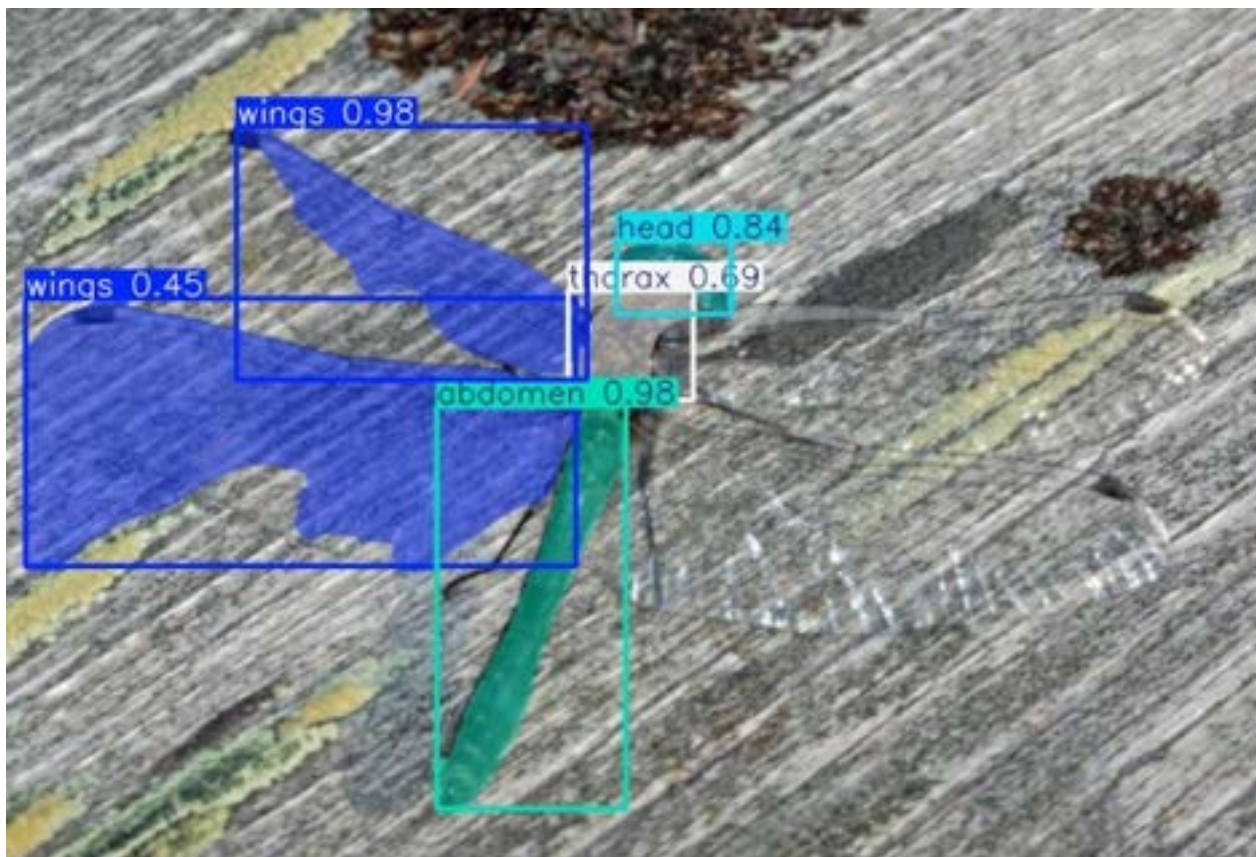

Yes, only all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model

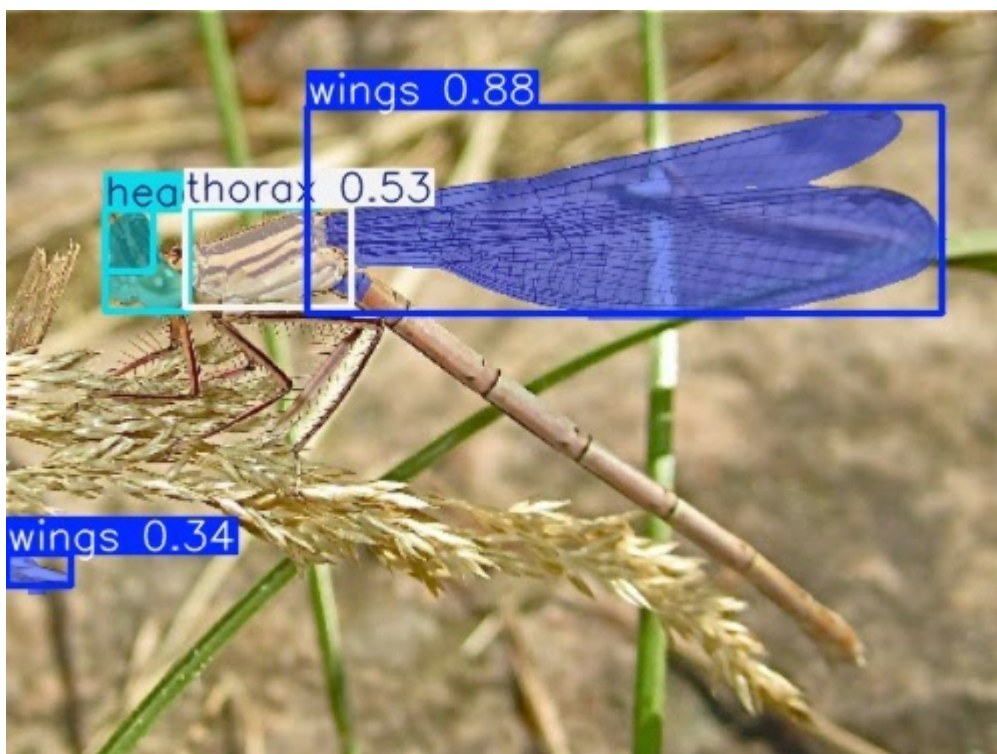

Yes, all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model. In addition to this, there are other objects misrecognized by the model

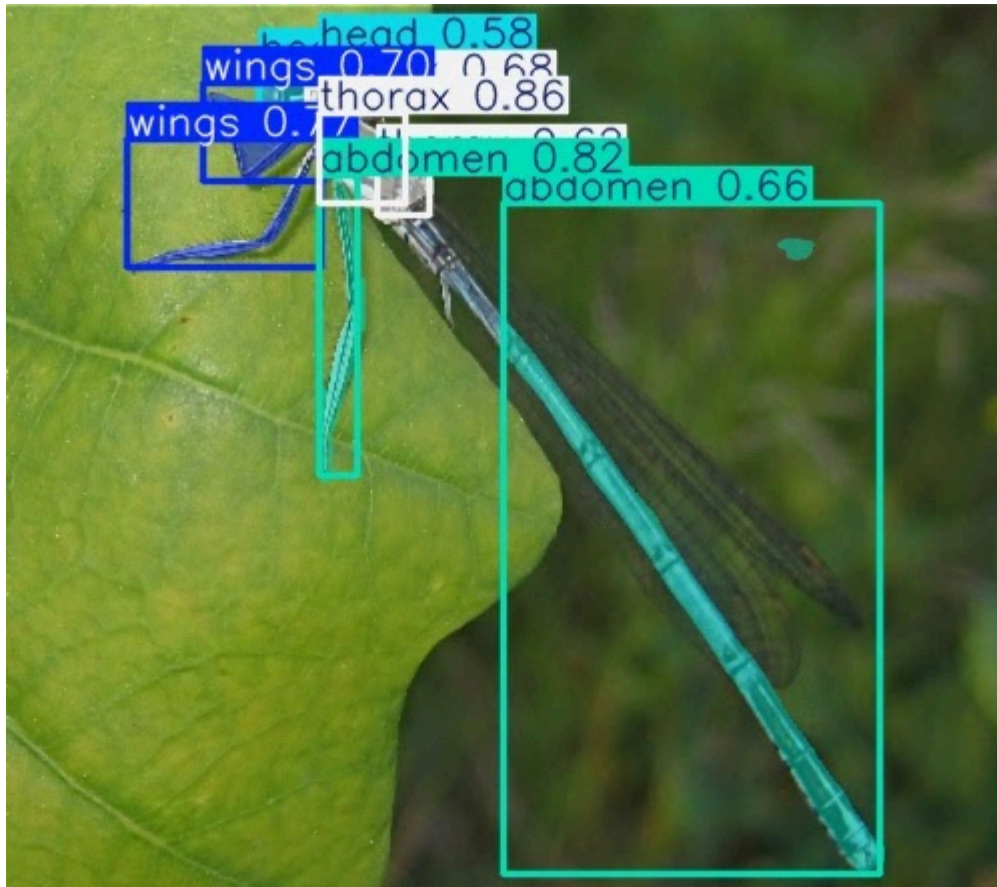

Yes, the three main parts (the head, thorax and abdomen) are recognised, and there can be some discrepancies with the wings, and/or some misrecognised objects

No, one or more of the three main parts (the head, thorax and abdomen) is not detected in the image

No, one of the three main parts (the head, thorax and abdomen) is misclassified

Section 1 / 150

1. Do you agree with the classification?

Markeer slechts één ovaal.

- ☐ Yes, only all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model
- ☐ Yes, all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model. In addition to this, there are other objects misrecognized by the model.
- ☐ Yes, the three main parts (the head, thorax and abdomen) are recognised, and there can be some discrepancies with the wings, and/or some misrecognised objects
- ☐ No, one or more of the three main parts (the head, thorax and abdomen) is not detected in the image
- ☐ No, one of the three main parts (the head, thorax and abdomen) is misclassified

Section 2 / 150

2. Do you agree with the classification?

Markeer slechts één ovaal.

- ☐ Yes, only all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model
- ☐ Yes, all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model. In addition to this, there are other objects misrecognized by the model.
- ☐ Yes, the three main parts (the head, thorax and abdomen) are recognised, and there can be some discrepancies with the wings, and/or some misrecognised objects
- ☐ No, one or more of the three main parts (the head, thorax and abdomen) is not detected in the image
- ☐ No, one of the three main parts (the head, thorax and abdomen) is misclassified

Section 3 / 150

Link for reference to key: <https://itismeganrms.github.io/dragonfly-formulier/>

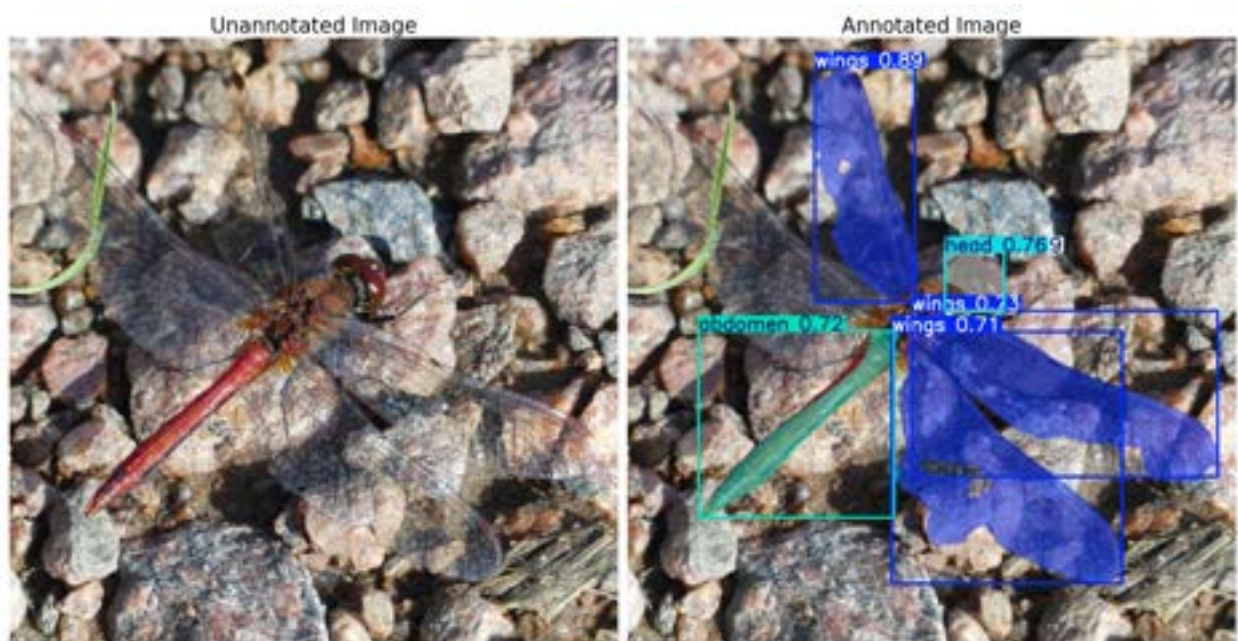

3. Do you agree with the classification?

Markeer slechts één ovaal.

- ☐ Yes, only all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model
- ☐ Yes, all seven parts (the head, thorax, abdomen and four wings) are present and recognised by the model. In addition to this, there are other objects misrecognized by the model.
- ☐ Yes, the three main parts (the head, thorax and abdomen) are recognised, and there can be some discrepancies with the wings, and/or some misrecognised objects
- ☐ No, one or more of the three main parts (the head, thorax and abdomen) is not detected in the image
- ☐ No, one of the three main parts (the head, thorax and abdomen) is misclassified
